

Not All Hand Drying Methods Are Created Equal, But Don't Take Just Our Word For It

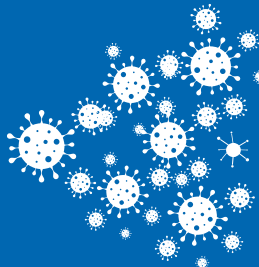

"From a hygiene viewpoint, paper towels are superior to electric air dryers. Paper towels should be recommended in locations where hygiene is paramount, such as hospitals and clinics." ¹

"The jet air dryer dispersed liquid from users' hands further and over a greater range (up to 1.5 m) than the other drying methods." ²

"Jet air and warm air dryers result in increased bacterial aerosolization when drying hands. These results suggest that air dryers may be unsuitable for use in healthcare settings" ³

"Higher levels of contamination were measured in washrooms using a Jet Air Dryer compared with those using Paper Towels." ⁴

"When washing hands with soap and water, wet hands with water and apply the amount of product necessary to cover all surfaces. Rinse hands with water and dry thoroughly with a single-use towel." ⁵
